

University of Applied Sciences
SINCE 2003

The Quality of Traditional Education. The Flexibility of Online Learning.
DOBA University of Applied Sciences
Your Success Story Starts Here.

Welcome to DOBA University of Applied Sciences – a space of knowledge, research and international perspective.

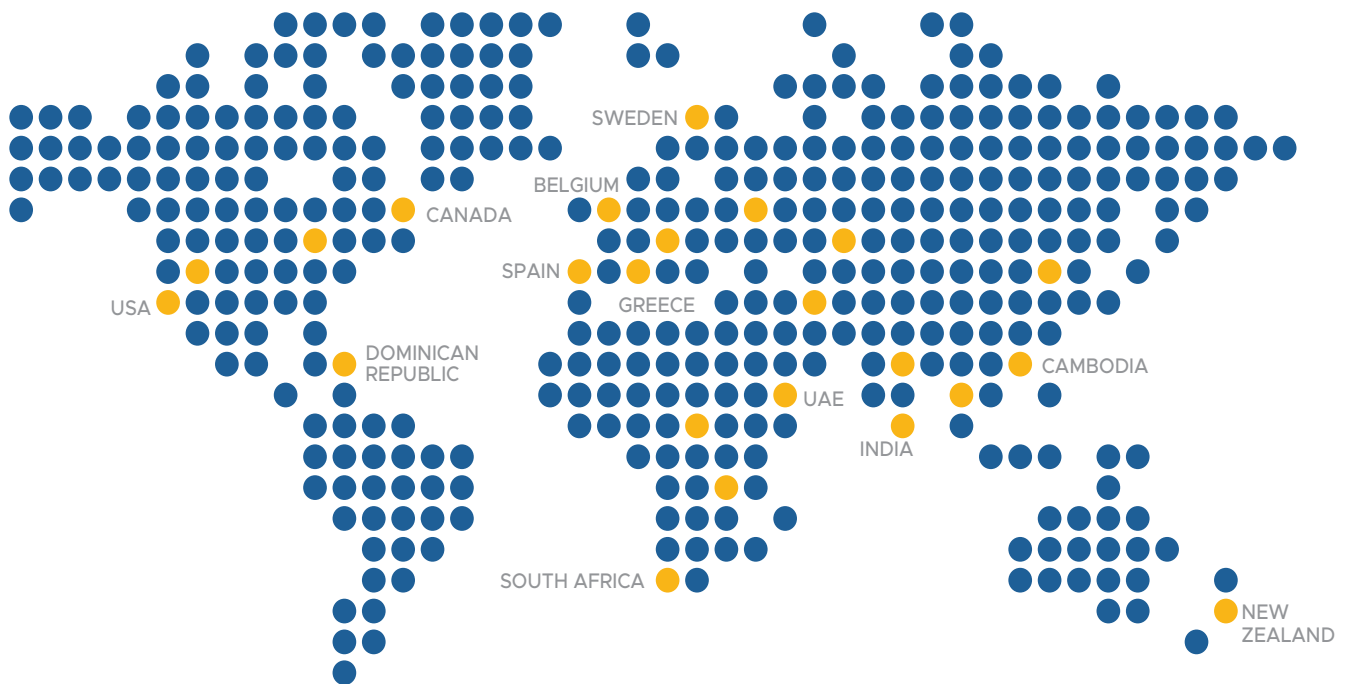

For many years, DOBA University of Applied Sciences has been building an academic community in which education is understood as a process grounded in scientific thought, research curiosity and intellectual responsibility. Our aim is not just the transmission of knowledge, but the creation of an environment in which knowledge is continuously developed and advanced.

We pay particular attention to understanding the business and international environment, which is becoming increasingly complex and unpredictable. Global value chains, digital transformation, regulatory changes and geopolitical shifts require modern organisations to adopt thoughtful leadership, strategic adaptability, and data-driven decision-making supported by the use of new technologies. This is why, at DOBA University of Applied Sciences, we promote analytical thinking, critical evaluation of sources, and a research-oriented approach to addressing challenges in the economy and society.

In the future, DOBA University of Applied Sciences will continue to strengthen research excellence, develop cooperation with domestic and international academic communities, and support students and educators in scientific work, publications and projects. I believe that a strong research orientation, together with the integration of practice and science, enhances the quality of study and contributes to the development of professionals who understand the global context in which they operate.

Assoc. Prof. Dr Gorazd Justinek 
DEAN of DOBA University of Applied Sciences

You can find additional information about the study program and the contents of individual courses on the faculty's website.

“I chose DOBA Faculty because of its unique approach to personal growth and the exceptional flexibility of its online studies, which allowed me to successfully balance my professional, family, and academic responsibilities. The master's program gave me broad knowledge, with a strong emphasis on practical examples that I will be able to apply easily in my work. I am very happy to have met many wonderful people, and the interaction between students and professors was excellent.”

— Gorana Japelj Bezjak, Master's graduate

Doctoral Degree Programme

INNOVATION AND SUSTAINABLE BUSINESS MANAGEMENT IN DIGITAL SOCIETY

Do you want to deepen your expertise in innovation and sustainable business management and contribute to cutting-edge research in the digital society?
